Education

Carnegie Mellon University — Pittsburgh, PA
School of Computer Science — 12/2022
- Master of Science in Computer Vision

New York University — New York, NY
College of Arts and Science — 05/2021
- Bachelor of Arts in Economics and Computer Science GPA: 3.86/4.00

Work and Research Experience

PathAI (pathai.com) — Boston, MA
Machine Learning Engineer Intern — 06/2022 - 09/2022
- Researching methods to measure and reduce the impact of catastrophic forgetting when fine-tuning models on a smaller or differing medical imaging dataset.

Generative Intelligence Lab (cs.cmu.edu/~junyanz/) Advisor Jun-yan Zhu — Pittsburgh, PA
Research Assistant — 02/2022 - Present
- Created a content-based search algorithm for finding image generative models with words or pictures, deployed to a web-based user interface (Paper [4], Website).

NYU CILVR Lab (wp.nyu.edu/cilvr/) Advisor Rob Fergus — New York, NY
Research Assistant — 05/2021 - 08/2021
- Researched Machine Common Sense (MCS) [1, 2]: designed predictive models (VGG+LSTM) that detect and localize implausible physics from deviation from predicted plausible physics. (Github)
- Achieved 84% True Positive and 73% True Negative rates on the Gravity physics test set.

NYU MMVC Lab (mmvc.engineering.nyu.edu/) Advisor Yi Fang — New York, NY
Research Assistant — 10/2019 - 08/2020
- Innovated lightweight MLPs dynamic initialized by a PointNet for 2x faster training and fine-tuning on 3D shape correspondence tasks while retaining the same level of accuracy compared to state of the art. (Paper [3])
- Designed MobileNet-SSD based models that provide real-time (>10/s) audio feedback to help the blind maintain social distance (Paper [2]) and help the blind with collaborative hand gestures (Paper [1], Talk).

Avigilon, Motorola Solutions (avigilon.com/) — Somerville, MA
Research Engineer Intern — 06/2019 - 08/2019
- Trained and tested a specialized LeNet model that classified human false-positive detections from the camera’s security cameras, reducing human false-positive detections by ~40% on proprietary test datasets.
- Modeled enhanced versions of the Kalman Filter (UKF, EKF) with C++ and Python to evaluate their potential to improve object tracking and detection when integrated into the security cameras.
