Education

New York University	New York, NY
Graduate School of Arts and Science	05/2028 (Expected)

- Doctor of Philosophy in Computer Science

Carnegie Mellon University	Pittsburgh, PA
School of Computer Science	12/2022

- Master of Science in Computer Vision   QPA: 3.97

New York University	New York, NY
College of Arts and Science	05/2021

- Bachelor of Arts in Economics and Computer Science   GPA: 3.86/4.00   *magna cum laude*

Work and Research Experience

New York University   Advised by Andrew Wilson & Saining Xie   New York, NY
PhD Student   09/2023 - 05/2028

- Research interest in exploiting novel structures in data with scalable ML. Paper [1].

PathAI (pathai.com)   Boston, MA
Machine Learning Engineer Intern   06/2022 - 09/2022

- Researching methods to measure and reduce the impact of catastrophic forgetting when fine-tuning models on a smaller or differing medical imaging dataset.

Generative Intelligence Lab (cs.cmu.edu/~junyanz/) Advised by Jun-Yan Zhu   Pittsburgh, PA
Research Assistant   02/2022 - 07/2023

- Created Modelverse, a content-based search algorithm that lets users find image generative models with words or pictures via a web-based user interface (Paper [2], Website). Presented at SIGGARPH Asia 2023.

NYU CILVR Lab (wp.nyu.edu/cilvr/)   Advised by Rob Fergus   New York, NY
Research Assistant   05/2021 - 08/2021

- Researched Machine Common Sense (MCS): designed generative models (VGG+LSTM) that detect and localize implausible physics in videos by learning to generate plausible frames. (Github)
- Achieved 84% True Positive and 73% True Negative rates on the Gravity physics test set.

NYU MMVC Lab (mmvc.engineering.nyu.edu/)   Advised by Yi Fang   New York, NY
Research Assistant   10/2019 - 08/2020

- Innovated lightweight MLPs dynamic initialized by a PointNet for 2x faster training and fine-tuning on 3D shape correspondence tasks while retaining the same level of accuracy compared to state of the art. (Paper [5])
- Designed MobileNet-SSD based models that provide real-time (>10/s) audio feedback to help the blind maintain social distance (Paper [4]) and with collaborative hand gestures (Paper [3]).

Avigilon, Motorola Solutions (avigilon.com/)   Somerville, MA
Research Engineer Intern   06/2019 - 08/2019

- Trained and tested a specialized LeNet model that classified human false-positive detections from the camera's security cameras, reducing human false-positive detections by ~40% on proprietary test datasets.
- Modeled enhanced versions of the Kalman Filter (UKF, EKF) with C++ and Python to evaluate their potential to improve object tracking and detection when integrated into the security cameras.
